

EZ Mod Walls are a full height wall partition solution to stick built walls that ensure a sophisticated and efficient workspace. They are less expensive and install very quickly with minimal damage to the building compared to framing up stick built walls. They also can be easily altered later as needs change, easily removed and are reusable.

Wall panels are constructed with sound-absorbing foam-core panels with designer vinyl finished lauan plywood or gypsum on both sides. Door panels come assembled and can easily change to inswing or outswing, left-hand or right-hand even after walls are built. Framing is maintenance-free anodized aluminum including electrical raceways.

EZ Mod Walls are especially designed for mobile & modular fleet buildings that are sold or leased to end users. Whether for additional office space in a building with existing offices or partitioning a building that is wide open, EZ Mod Walls offer complete on-site flexibility.

EZ Mod Walls can be ordered in kits especially suited for single wide mobile offices or in a complete package with everything needed per your wall print.

Orders are packaged and shrink wrapped to be watertight and can be shipped within 10 days to your dealer yard or directly to the job site throughout the United States & Canada.

EZ Mod Walls

Modular Office Wall & Partition Solutions

A standout feature of EZ Mod Walls is you can email us your wall layout drawing and we will get you a quote for a complete package based on the lineal footage by the next business day. The quote will include everything

needed, aluminum framing, wall & door panels complete with hardware and screws. If electrical raceways are needed, they can be included.

When your job becomes a go, send us your PO# and from there Larry will write up the order with a complete materials list. That list is double checked by our shop foreman, Jeremy who then executes the shop production to have ready for shipment in 10 days or less.

The EZ crew will pull and package the order with a check-off list. Packaging is braced and secured at strap points. Once banded up solid, the entire package is shrink wrapped to be watertight. Each pallet is clearly marked with your job name and PO# so there are no confusions whether delivered to your yard or directly to the job site.

Small orders are shipped LTL but larger project orders shipped on a flatbed trailer where the load remains until delivery. This eliminates damages caused by transfers from one trailer to another.

EZ Mod Walls can also be used for warehouse office space!
